DECONTAMINATION SERVICES

**MORE EFFECTIVE
and COSTS
30 - 40% LESS**

SERVICE AVAILABLE FOR:

Post-construction & renovation

Outbreak mitigation

Regularly scheduled
decontamination

OUR 3-STEP DECONTAMINATION PROCESS

STEP 1: PRE-CLEANING

Disinfection can't take place until the surfaces are clean. We will manually clean all surfaces, floors and equipment to remove all gross soil and organic matter prior to disinfection.

STEP 2: MANUAL DISINFECTION

If you don't remove **biofilm**, you won't eliminate the pathogens. All surfaces, floors, and equipment will be manually disinfected with an EPA approved **sporicidal disinfectant** that is effective against pathogens within biofilm,.

STEP 3: ENHANCED DISINFECTION

With the soil and biofilm removed, it's critical to disinfect again to ensure the cleanest and safest environment. Using an **advanced electrostatic sprayer with a sporicidal disinfectant**, we will disinfect all surfaces, floors and equipment.
